

CARE Program

COMPREHENSIVE ACUTE REHABILITATION EMPOWERMENT PROGRAM

Any individual can be subject to limb loss, which can be devastating both emotionally and physically. There are many tools available that can assist amputees in recovering and regaining the self-confidence to move forward. We offer comprehensive support to help you, your family, and your caregivers navigate the prosthetic journey. Our CARE Coordinators provide guidance, connect you with resources, help you set goals, and assist you in accessing services that support your recovery. In select markets, Certified Peer Visitors are available to provide you with real-life insight, encouragement, and reassurance to help ease the transition and complement your medical care. Our CARE Program options vary by region, [call your local clinic to learn more about the CARE resources available in your area.](#)

PHASE 1

Pre and Post-operative

- CAREs Coordinator outreach
- Discuss process of potential protective post-operative device if ordered by MD

PHASE 2

Sub-Acute and Rehabilitation

- Once patient has been directed to home or inpatient rehabilitation hospital:
- Clinician/CAREs Coordinator corresponds with therapist on patients progress
 - CAREs Coordinator will check-in regularly with patient to offer help and guidance
 - Healed and approved for prosthetic intervention by MD

PHASE 3

Function and Outcomes

- Prosthetic evaluation in-clinic: medical history review, determine goals, and more
- Patient casting in-clinic
- Patient is fit with a test version of prosthetic device in-clinic
- Device is delivered in-clinic
- Patient is directed to outpatient PT or rehab for gait and strength training
- ForMotion team will continue to coordinate with CAREs Coordinator for resources or further assistance
